

Culver City USD Construction Update

Meet Your Construction Manager

Balfour Beatty Construction is pleased to be your new partner for the upcoming athletic field project. We will also be working with the district's solar consultant and assist with the coordination of the solar project at Culver City Senior High School. We expect that construction will break ground in the first quarter of 2013. We look forward to working with the Culver City Unified School District while running a clean and safe jobsite.

We will be working closely with the district's Architect, Westberg + White Architects to deliver the Field Project along with the coordination of the Solar Panel Project. We have proven experience in successfully delivering similar athletic track and field construction projects for a large number of districts statewide. Balfour Beatty also has a strong commitment towards Sustainability and is one of the largest green builders in the nation, with a large staff of LEED Accredited professionals.

We fully intend on being good neighbors and partners with the community and thank you in advance for your cooperation!

Balfour Beatty Construction
